

Energy citizenship for a sustainable future

DIALOGUES
Knowledge Eco-System (KES)

This project has received funding from the European Union's Horizon 2020 research and innovation programme under grant agreement No 101022685

project overview //

DIALOGUES sees energy citizenship research as an opportunity to link the Energy Union's strategic objectives and the various contributions of **citizens** under one conceptual framework focussing on broad trends in citizen engagement with energy topics, awareness of GHG impacts of their choices, equity, and justice.

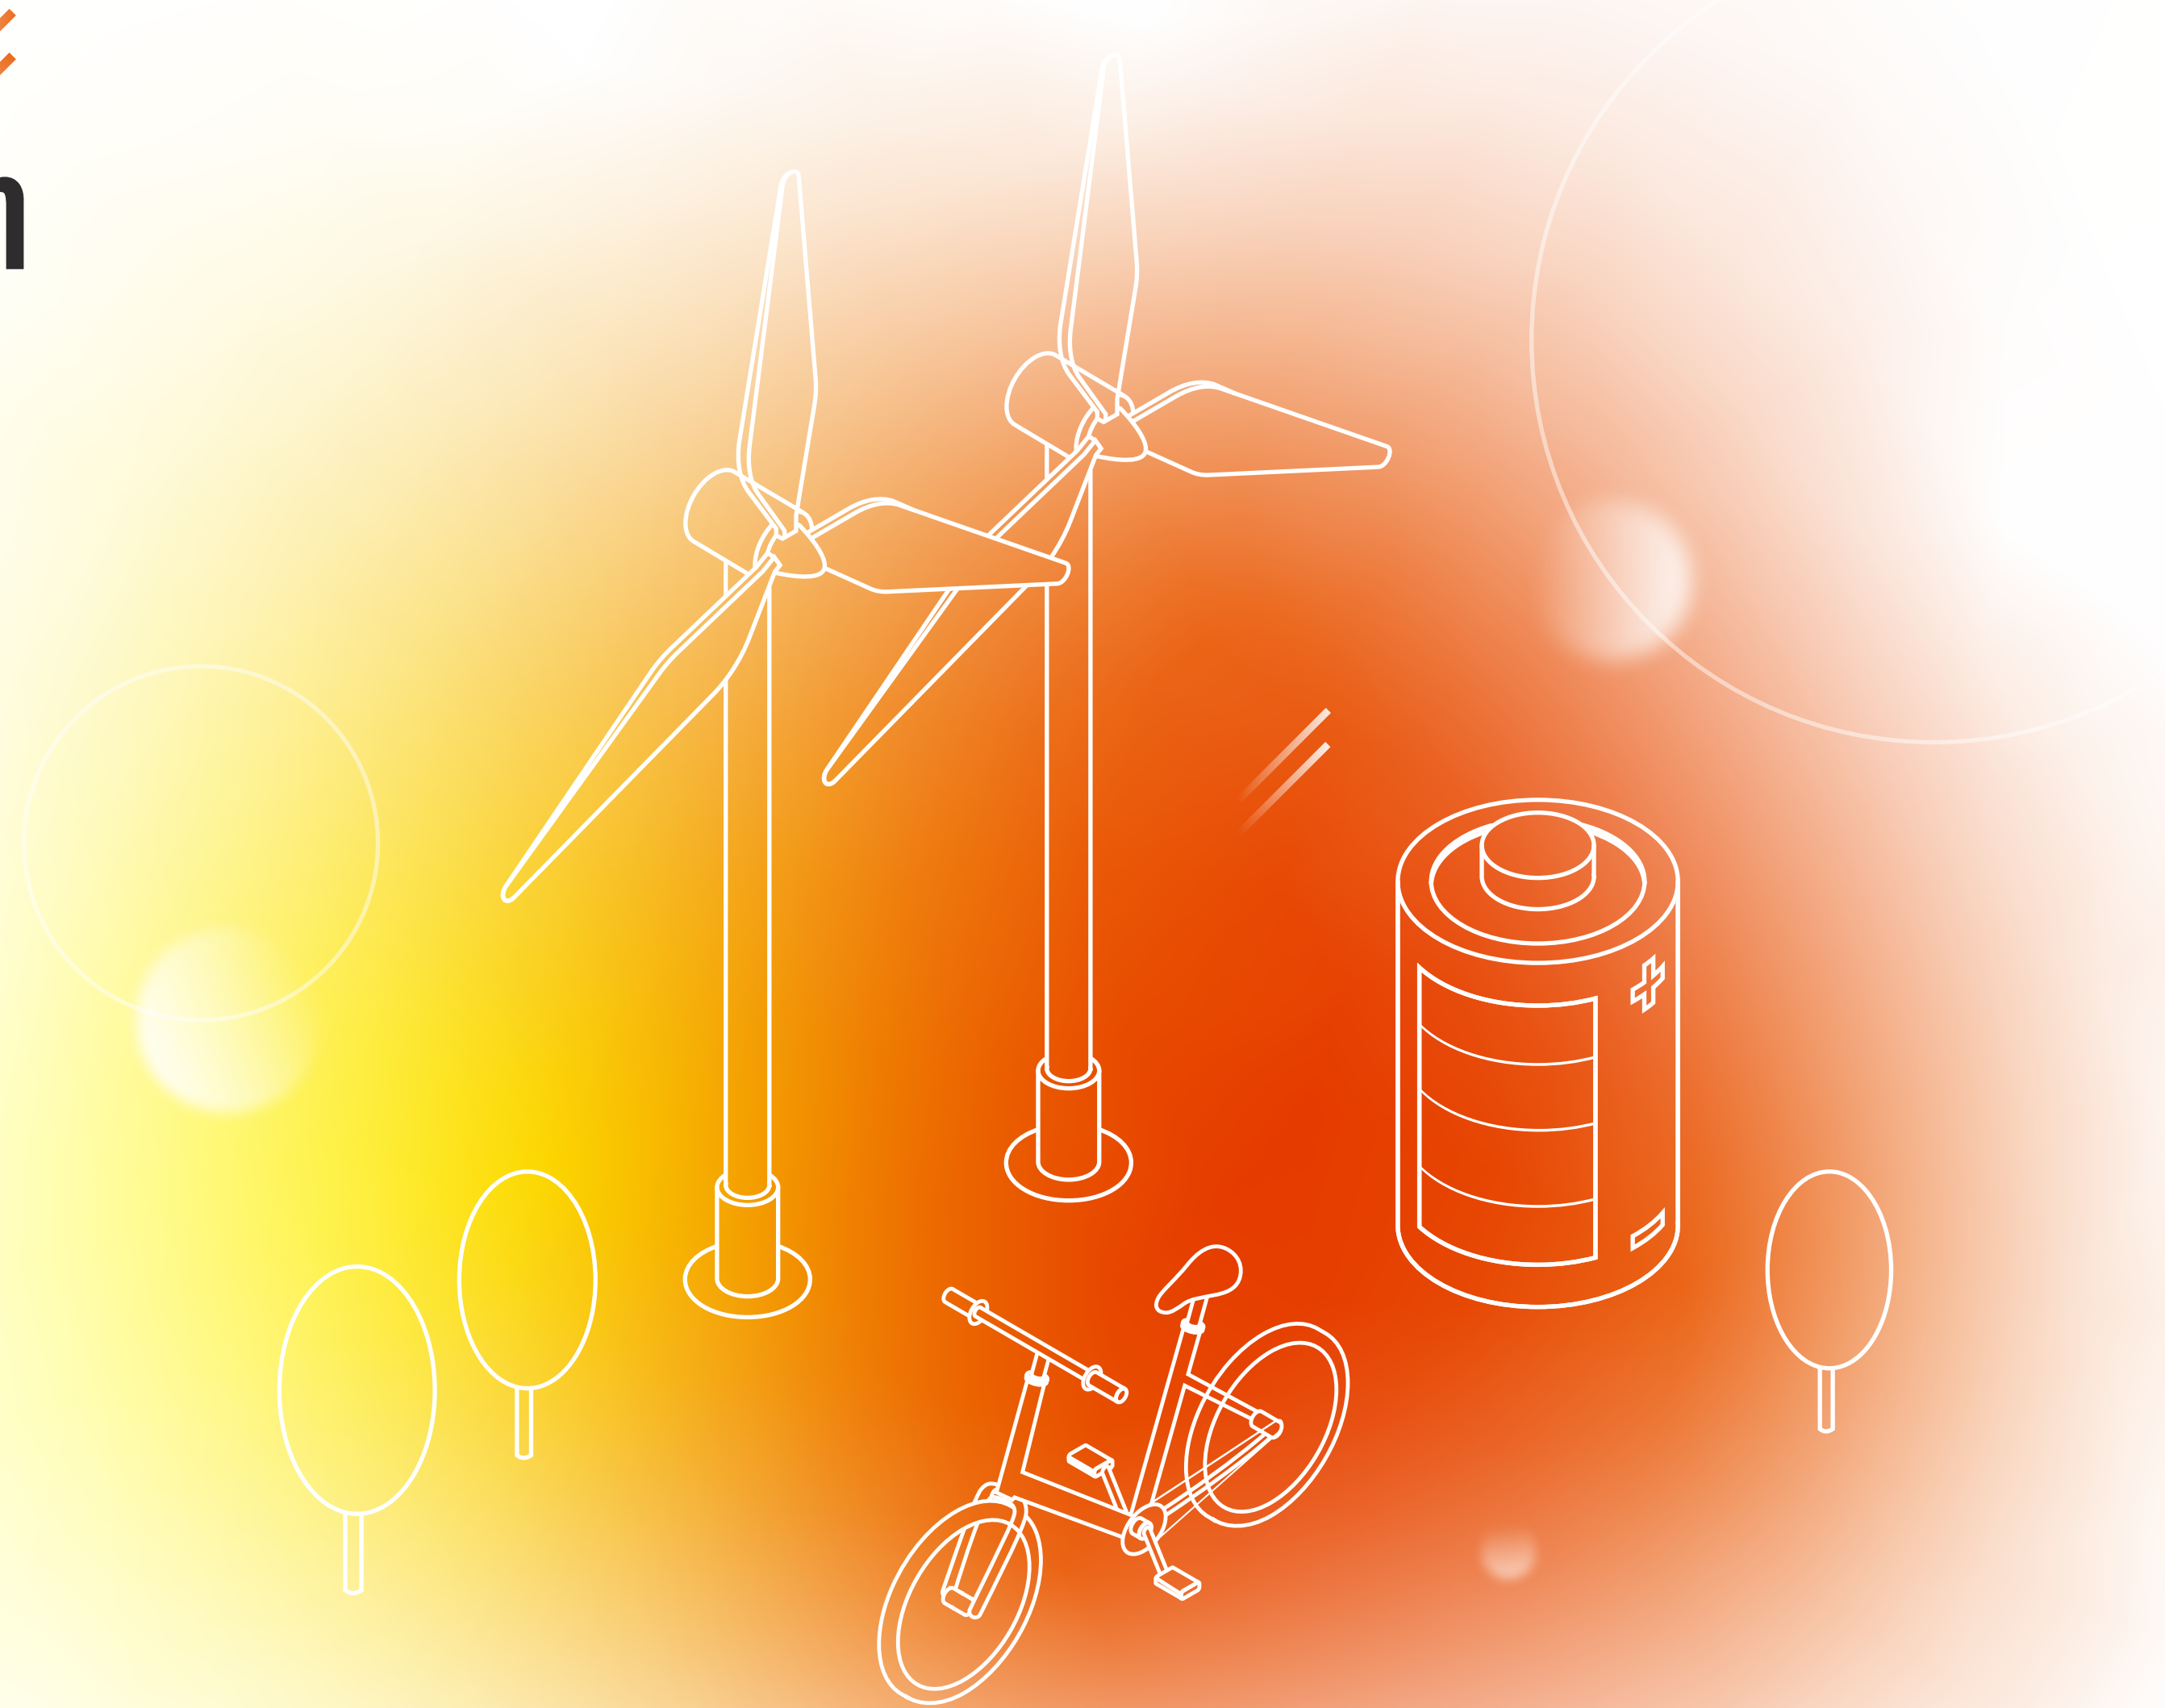

DIALOGUES **central methodological pillar** is grounded in tested inter and transdisciplinary techniques, with a spotlight on open innovation and co-design of the research process through novel **Citizen Action Labs in 8 countries**.

To reach this global objective, the practical objective of DIALOGUES is to **operationalise, contextualize, measure, and support** the framework environments, policies and institutions that allow deep, inclusive energy citizenship to emerge.

knowledge platform

The DIALOGUES Knowledge Eco-System has been created to promote a comprehensive, integrated platform for sharing knowledge about the concept of energy citizenship and the manifold research, dissemination and communication activities in DIALOGUES.

- DIALOGUES website
- DIALOGUES Survey Tool
- DIALOGUES Data Analysis Tool
- DIALOGUES Social Media

what is it & where can you find it?

DIALOGUES website at
dialogues-project.eu

Serves as a central hub for access to all project resources, updates and contacts, facilitating easy navigation through the project's extensive outcomes and results.

DIALOGUES Survey tool
dialogues.site

Designed for collecting data directly from citizens and stakeholders, providing insights into public perceptions and experiences of the concept of energy citizenship.

Social Media

DIALOGUES Data Analysis Tool
r.dialogues.site

These tools process and analyse the data collected, transforming raw data into actionable insights that are essential for designing effective energy policies.
